NIH/NIA	Total Project Award: \$709,375		
" Recollection and Familiarity in Amnestic-Mild Cognitive Impairment"			
The goal of this project is to better define the specific nature of memory loss in patients with Amnestic-Mild Cognitive Impairment, a group enriched in patients with early Alzheimer's disease pathology. It is hoped that this understanding will lead to more specific memory markers (behavioral and ERP) of early AD versus other conditions.
