This document outlines the steps to upload content to Knowledge Link. It is strongly recommended that you upload content to the TEST-STAGE environment first and test that content before uploading it to production.

Use the following instructions to add one or more Content Objects to an Item in Knowledge Link. These instructions assume the content object has already been created in Knowledge Link. For more information on creating content objects, see the document *Uploading Content to Knowledge Link*.

---

**Attach a Content Object to an Item**

**NOTE:** If you are replacing existing content, consider whether you should create a new item vs. using an existing item. If the changes are cosmetic or the content has not changed substantially, then you could replace the content in an existing item. However, if the content has changed substantially, then you should create a new item. (For example, the regulations or procedures being taught have changed or the software being taught is a new version – EPIC 2015 vs. EPIC 2017.)

1. Open the Item in Knowledge Link.
2. If the item contains existing content, click the red “x” button in the **Remove** column.
3. To add new content, click the green “+” icon and then click **Add Content Object**.
4. If you do not know the Content Object ID, click the magnifying glass to search for it, then click **Select**.

*Note: when you click the magnifying glass and find the content object, you can copy the COBJ title (highlighted below) and use it in the next step.*
5. Enter the Object Name or paste it from the previous step. 
   (Typically, this is the same as the course title. However, it may be 
   different if there are multiple content objects attached to a single 
   item.) Do not check or complete any other fields in this window. 
   Click OK.

6. Repeat steps 3 - 5 if you need to add additional content objects.
7. If you have multiple content objects, use the handles to drag and drop the content in the desired order.

8. To force sequential completion of multiple content objects, click the main group title, then click the checkbox for 
   that option. Then click OK.

9. To define other settings, click Settings, then click Modify Settings.
10. Select settings as needed for your course, then click **OK**.

Note:

**Skip content structure page on launch** should be checked if there is only one content object.

For items with multiple content objects, do not check this box.

**If any of the content contains a link to a Lynda video or course, DO NOT check this box.**

11. Click **Save**.

12. Click **Yes**.

If you select No, your changes will not be saved.
13. A list of users will appear. Users who did not start the course yet are selected by default. (Highlighted below.)

**NOTE:** If you DO NOT see checkboxes to reassign the course, proceed to step 15.

![View Users to Reassign](image)

14. At this point, you can choose whether or not to reassign the course to specific people.

**If the item contains one content object OR users are unable to complete the course with the current content,** select the checkbox: (Select all the Users of the search results). This is the simplest and least confusing option. All users will be assigned the same content and all users will need to start at the beginning, even if they started the course.

**If the item contains multiple content objects,** only select individual users who you know must have the course reassigned. For example, an SME who needs to review the change, or a user who was having trouble with the original course. (See example in image below.) These users will have to repeat all content objects. For example, if the user finished 9 out of 10 content objects, and you only updated #10, the user will still need to repeat the first nine content objects.

![View Users to Reassign](image)

**NOTE:** Users that you do not select will see the course as it was before you made changes. (They will see the old content object and/or the old order of content.) This may cause confusion in some cases.

15. Click **Finish.** If there are a large number of users, you may need to schedule the job. Otherwise, users will be reassigned immediately.
