The purpose of this educational activity is to provide in-depth analysis and procedural understanding of both bicuspid and 3-cusp aortic valve repair and valve-sparing aortic root surgery. Additionally, this symposium will provide technical and conceptual pearls related to aortic valve repair. Faculty presentations will constitute deep-dive sessions addressing valvular and aortic root pathology in the context of aortic valve preservation, with discussion panels focusing on the technical nuances and detailed differences in aortic valve repair and valve-sparing aortic root techniques. Live on-tape sessions will be complemented with comprehensive didactic coverage of the clinical, technical, and imaging tools required to develop a successful aortic valve repair program.

**Learning Objectives**

Upon completion of the activity, the participant should be able to:

- Evaluate the aortic root complex to plan for aortic valve repair
- Review techniques of bicuspid and tricuspid aortic valve repair
- Use echocardiography to plan for aortic valve repair
- Perform Echocardiographic and physiologic evaluation of aortic insufficiency after valve repair
- Identify techniques for performing valve-sparing root reimplantation
- Describe clinical and echocardiographic surveillance after aortic valve repair

**Hosting Department**

The *4th North American Aortic Valve Repair Symposium* is hosted by the Department of Surgery, Division of Cardiovascular Surgery at the University of Pennsylvania.
